ABSTRACT
OF
DESIGN OF THE EAGLE SIGNAL RELAY TESTER
BY
DAVID M. GERARDOT

A relay test set can be built to test the eagle signal relay. This test equipment would test the relay faster and use less skilled labor. The faster testing and cheaper labor allows for the same profit margin at a lower per piece cost. The lower cost would allow the Marketing group to bid lower on the power supply contract that this relay will be built into. By a lower bid General Electric has a better chance to get the contract.
